

(2) 相当于回转件上的静平衡.

$$m_1 r_1 = 480 \text{ kg} \cdot \text{mm}, \quad m_2 r_2 = 500 \text{ kg} \cdot \text{mm}, \quad m_3 r_3 = 400 \text{ kg} \cdot \text{mm}$$

以  $l_1'' = 48 \text{ mm}$  代表  $m_1 r_1$ , 根据比例尺画矢量图.

$$\therefore l_1'' = 213 \text{ mm}, \quad \therefore m r = 213 \text{ kg} \cdot \text{mm}.$$

$\therefore$  应在  $m r$  的反方向, 且半径为  $r_b$  上加上质量  $m_b$  才能保证平衡.

$$m_b r_b = m r \quad \therefore m_b = m r / r_b = 213 / 200 = 1.065 \text{ kg}$$

八: 求效率:

$$\textcircled{1} \eta_{AB} = \frac{z_3 z_2}{z_1 z_2'}$$

$$\textcircled{2} \eta = \eta_1^2 \cdot \eta_2^4 = 0.95^2 \cdot 0.98^4 = 0.83. \quad \textcircled{3} W_{\text{输入}} = W_{\text{输出}} / \eta = 2.4 \text{ kW}$$

九:

$$\therefore \bar{b}c = 24 \text{ mm}, \quad \bar{p}c = 14 \text{ mm}, \quad \bar{p}s_2 = 20 \text{ mm}$$

$$\therefore V_C = 0.7 \text{ m/s}, \quad V_{CB} = 0.12 \text{ m/s}$$

$$\therefore \omega_3 = V_C / l_{CD} = 0.4 \text{ rad/s}, \quad \omega_2 = V_{CB} / l_{BC} = 0.23 \text{ rad/s}$$

$$\textcircled{1} \therefore \text{等效转矩 } M_1 = M_3 \frac{\omega_3}{\omega_1} = 0.4 M_3 = 120 \text{ N} \cdot \text{m}$$

$$\textcircled{2} \text{由速度影像图有 } V_2 = \omega_2 \bar{p}s_2 = 1 \text{ m/s}$$

解: 依题意用速度图解法求解.

$$\vec{V}_C = \vec{V}_B + \vec{V}_{CB}$$

$$\text{方向: } \perp CD \perp AB \perp CB$$

$$\text{大小: ? } m_{AB} \text{ ?}$$

$$V_B = m_{AB} = 0.15 \text{ m/s}$$

$$\text{设 } m \text{ 为单位 1, } \therefore V_B = 0.15 \text{ m/s}$$

$$\text{以 } P \text{ 为极点, } \bar{p}b = 30 \text{ mm 代表 } V_B$$

$$\therefore \omega_b = \frac{V_B}{\bar{p}b} = 0.005 \text{ m/s} \cdot \text{mm}$$

画速度影像图.

$$\begin{aligned} J_A &= J_S + J_2 \left( \frac{\omega_2}{\omega_1} \right)^2 + m_2 \left( \frac{V_2}{\omega_1} \right)^2 + J_3 \left( \frac{\omega_3}{\omega_1} \right)^2 \\ &= 0.1 + 0.2 \left( \frac{0.23}{1} \right)^2 + 20 \left( \frac{1}{1} \right)^2 + 0.2 \left( \frac{0.4}{1} \right)^2 \\ &= 20.14 \text{ kg} \cdot \text{m}^2 \end{aligned}$$

(4)
